making environmental & EPA compliance a whole lot simpler

Environmentally Sustainable Water Blasting Equipment

The Enviroblaster is a multipurpose, portable, high pressure cleaning system designed to wash, collect and recycle water used in hard surfaces cleaning, equipment and vehicle washing.

This Australian built system sets the standards for sustainable cleaning practices creating a closed loop process by continuously filtering & reusing the original start up water allocation.

Enviroblast ensures your business cleaning practices comply with environmental enforcement and new water restrictions.

Benefits

- Capture 75-90% of the water for re-use
- Reduces both water usage and waste water costs
- Eliminates storm water run-off
- Complies with pressure cleaning environmental guidelines
- Independently operates with its own water and power

Standard Features

High Pressure Cleaning System:
5000 psi 21L per minute Honda driven pump

Hot Water System:
With variable temperature control to 140°C

Vacuum Recovery System:
Blower unit
Heat resistant vacuum hose - 60m
Vacuum hose reel

5 Stage Water Recycling Plant:
Solids separation system
Solids and free oil removal to 5 micron
Light detergents and Oil removal
Polishing of water
Final filtration process.

Electric Hose Reel:
100m of high pressure hose

Accessories:
Surface Cleaner / Rotor wash
Lance with variable pressure control

2,000L Water Tank

Accessories:
Integrated heavy duty Skid or Trailer design

Absolutely nothing compares to an Enviroblast Mobile Wash System, perfect for hard surface cleaning applications, Truck, vehicle and equipment washing.
